

Editors: Hansen, Helena, MetzI, Jonathan (Eds.)

Structural Competency in Mental Health and Medicine

A Case-Based Approach to Treating the Social Determinants of Health

- Each chapter begins with a case study that illustrates a structural competency in practice
- Includes curricular materials and evaluation tools used by leading structural competency practitioners

- Written by experts with cross-training in clinical and social sciences

This book documents the ways that clinical practitioners and trainees have used the “structural competency” framework to reduce inequalities in health. The essays describe on-the-ground ways that clinicians, educators, and activists craft structural interventions to enhance health outcomes, student learning, and community organizing around issues of social justice in health and healthcare. Each chapter of the book begins with a case study that illuminates a competency in reorienting clinical and public health practice toward community, institutional and policy level intervention based on alliances with social agencies, community organizations and policy makers. Written by authors who are trained in both clinical and social sciences, the chapters cover pedagogy in classrooms and clinics, community collaboration, innovative health promotion approaches in non-health sectors and in public policies, offering a view of effective care as structural intervention and a road map toward its implementation.

Structural Competency in Mental Health and Medicine is a cutting-edge resource for psychiatrists, primary care physicians, addiction medicine specialists, emergency medicine specialists, nurses, social workers, public health practitioners, and other clinicians working toward equality in health.
